

Loss Adjuster First Site Report

Claim ID	PROP-B2B-2026-0417
Insured	Nordhafen Precision Parts GmbH
Document type	Loss adjuster report
Issued by	Baltic Loss Adjusting GmbH
Document date	15 May 2026
Loss location	Hafenstrasse 18, Building B, 30179 Hannover, Germany

Inspection details

Field	Entry
Adjuster	Leonie Brandt, Baltic Loss Adjusting GmbH
Site visit	13 May 2026, 10:00-15:35
Attendees	Plant manager Erik Schulte; broker Jan Kruger; landlord rep Cosima Kranz; restoration contractor SiteDry GmbH
Areas inspected	Loading bay, charging alcove, CNC hall, packing area, mezzanine office, external yard
Access restrictions	Seat of fire taped by police; electrical expert not yet appointed; stock movement limited

Preliminary narrative

The loss appears to have originated in or near the charging alcove at the south-east corner of the loading bay. The fire was contained, but smoke and sprinkler discharge affected wider production and storage areas. The insured expects production interruption to exceed four weeks because the CNC hall requires cleaning, air-quality clearance, and replacement electronics for two CNC machines.

The adjuster noted that the premises and lease boundaries need clarification. Several claimed repair items appear to involve the landlord-owned roof, main wall panels, and roller shutter. The insured may still be liable for those items under lease, but ownership is not yet proven.

Preliminary reserve recommendation

Reserve bucket	Amount	Basis / caution
Tenant improvements / internal building works	EUR 380,000	Includes clean-up, partitions, doors, ceiling panels. Shell building to be separated.
Stock and WIP	EUR 540,000	High uncertainty; ERP export not reconciled with physical count or salvage.
Machinery and equipment	EUR 425,000	Electronics contamination, two CNC controllers, measuring bench, forklift charger.
BI gross profit	EUR 335,000	Assumes 21 payable days after waiting period and mitigation; to be revised.
Extra expense	EUR 45,000	Subcontract production, expedited freight, dehumidification, security.
Total	EUR 1,725,000	Before deductible, VAT review, coverage positions, and salvage.

Immediate instructions issued

- Retain charger, plug, extension lead, battery, breaker, and nearby packaging remnants until expert release.
- Prepare segregated stock list showing item number, production stage, cost build-up, age, customer order, and salvage status.
- Separate emergency mitigation from betterment or permanent repair in all contractor invoices.
- Provide lease, landlord correspondence, maintenance records, charging-station installation invoice, and CCTV export.
- Do not scrap CNC electronics until contamination test and repair quote are obtained.

Coverage and causation issues

Issue	Adjuster note
Charging warranty	Possible breach if overnight charging used temporary extension lead; causation and knowledge still open.
Landlord property	Lease may make tenant responsible for internal damage but not structural roof/wall panels.
BI period	Insured forecast of 8 weeks may include delayed replacement parts and customer reallocation not all caused by physical damage.
Machinery condition	Pre-loss maintenance logs needed. Rust noted on measuring bench guide rail may pre-date sprinkler event.
Subrogation	HanseLift Service GmbH serviced charger eight days before loss; rights should be preserved.

Adjuster conclusion

Coverage should not be denied at this stage. The claim should proceed under reservation while cause investigation, lease responsibility, stock reconciliation, and BI mitigation are developed. The adjuster recommends no admission of liability for landlord shell repairs or full 56-day BI period pending documentation.
